

Acquiring Badges and Zone Control Co-Driver License

Congratulations! By being in this program you have the potential to become an Expert Strategic driver. You will gain hundreds of experiences to earn five stars for the Pedestrian and Bicycle Awareness Badges and then become a Co-Driver and earn the Awareness, Share the Road, and Car Control Badges and Star to be awarded the Zone Control Co-Driver License. What makes this program so powerful is you must develop your skill levels into habit and demonstrate successful performance.

After you receive the Zone Control Co-Driver License and become of licensing age you are then eligible, with your parent's permission, to begin the in-car driver training. You will be able to earn additional stars on your Awareness, Share the Road, and Car Control badges, which will serve as data for an insurance discount.

The first star for the Pedestrian Badge is earned after performing the required activities and receiving a score of 100 on the Pedestrian Awareness Quiz, which is the beginning of mastering Zone Control Strategies to share the road for zero crashes.

Strategy to share the road is the science and art of moving the vehicle from point A to point B in a **courteous, smooth, efficient, economical, responsible, stress-free, and safe manner.**

Do you want these values?

Once all of the strategies of Zone Control are cultivated into habit, you will have better awareness and car control HABITS than those of most adult drivers — and even better than many law enforcement drivers! You will learn how to prevent, detect and correct skids and be successful in driving the Skid Monster, which we will try to make available for you to drive.

What makes this program most effective is the structure of practice sessions. Just like mastering any sport, or musical instrument, it is the concentrated practice that provides enough repetitions to build in the brain a lasting mind full of perfect habits. To cultivate the habits you are provided with Cue Cards and Mind Cue Challenges. The more time you can spend practicing as a pedestrian, bicyclist, or co-driver, the stronger and spontaneous correct actions will develop.

To get started, do Set 1 Activities and use the Mind Cue Challenge for concentrated practice.
